Event heating

Andrews Sykes Climate Rental's team is an expert in keeping guests warm as and when required. Irrespective of the event being large or small, we are dedicated to providing you with an effective service that satisfied your heating requirements.

Recently an event organizer contacted us with regards to a temporary heating requirement for a semi outdoor sports event. The event was being attended by approximate 100 guests and the outdoor set up made the seating area chilly and was sure to leave the guests shivering as UAE was going through a cold spell. Our specialist engineer who was in contact with the client throughout the rental process, recommended the use of our high performance air conditioning unit HPAC 90 which came with a heat pump to provide the necessary heating.

The HPAC90 is one of our most versatile unit in our fleet which functions effortlessly in any weather and operates in an environmentally friendly way. The units were placed just outside the venue and a ducting system was installed to transfer the heat towards the seating area. We as well provided with our newly launched heater unit- ID35 which delivered high volumes of dry, fume free heat which has been tested to the highest safety and reliability standards. The ID35 was installed discreetly behind the guest seating area and operated on low noise levels to keep the ambiance of the event unaffected.

Throughout the entire event there were no problems and the customer was very satisfied with our efficient timings and by the smooth setting up of equipment, especially as all the seated guests were kept warm!

Power Supply 415v 3 ph 84 amps
Air flow (max) 15000m3/h
Dimension 2280 x 2030 x 2450mm
Duct length (max) 50 meters
Nominal cooling duty 90kW
Average power consumption 48.4kW
Duct diameter size 600mm
Noise level (max) 75.2 dBA
Plug type 125 amp 5 pin
Typical cooled area 2000m3
